INTRODUCTION

Project Vision

AI Fashion Stylist is a generative AI-powered web application that acts as a personal digital stylist, helping users create, visualize and manage outfits tailored to their personal taste and wardrobe.

By combining computer vision, conversational AI and generative models, the system delivers personalized fashion recommendations and realistic outfit visualizations in an interactive and intuitive way.

Core Capabilities

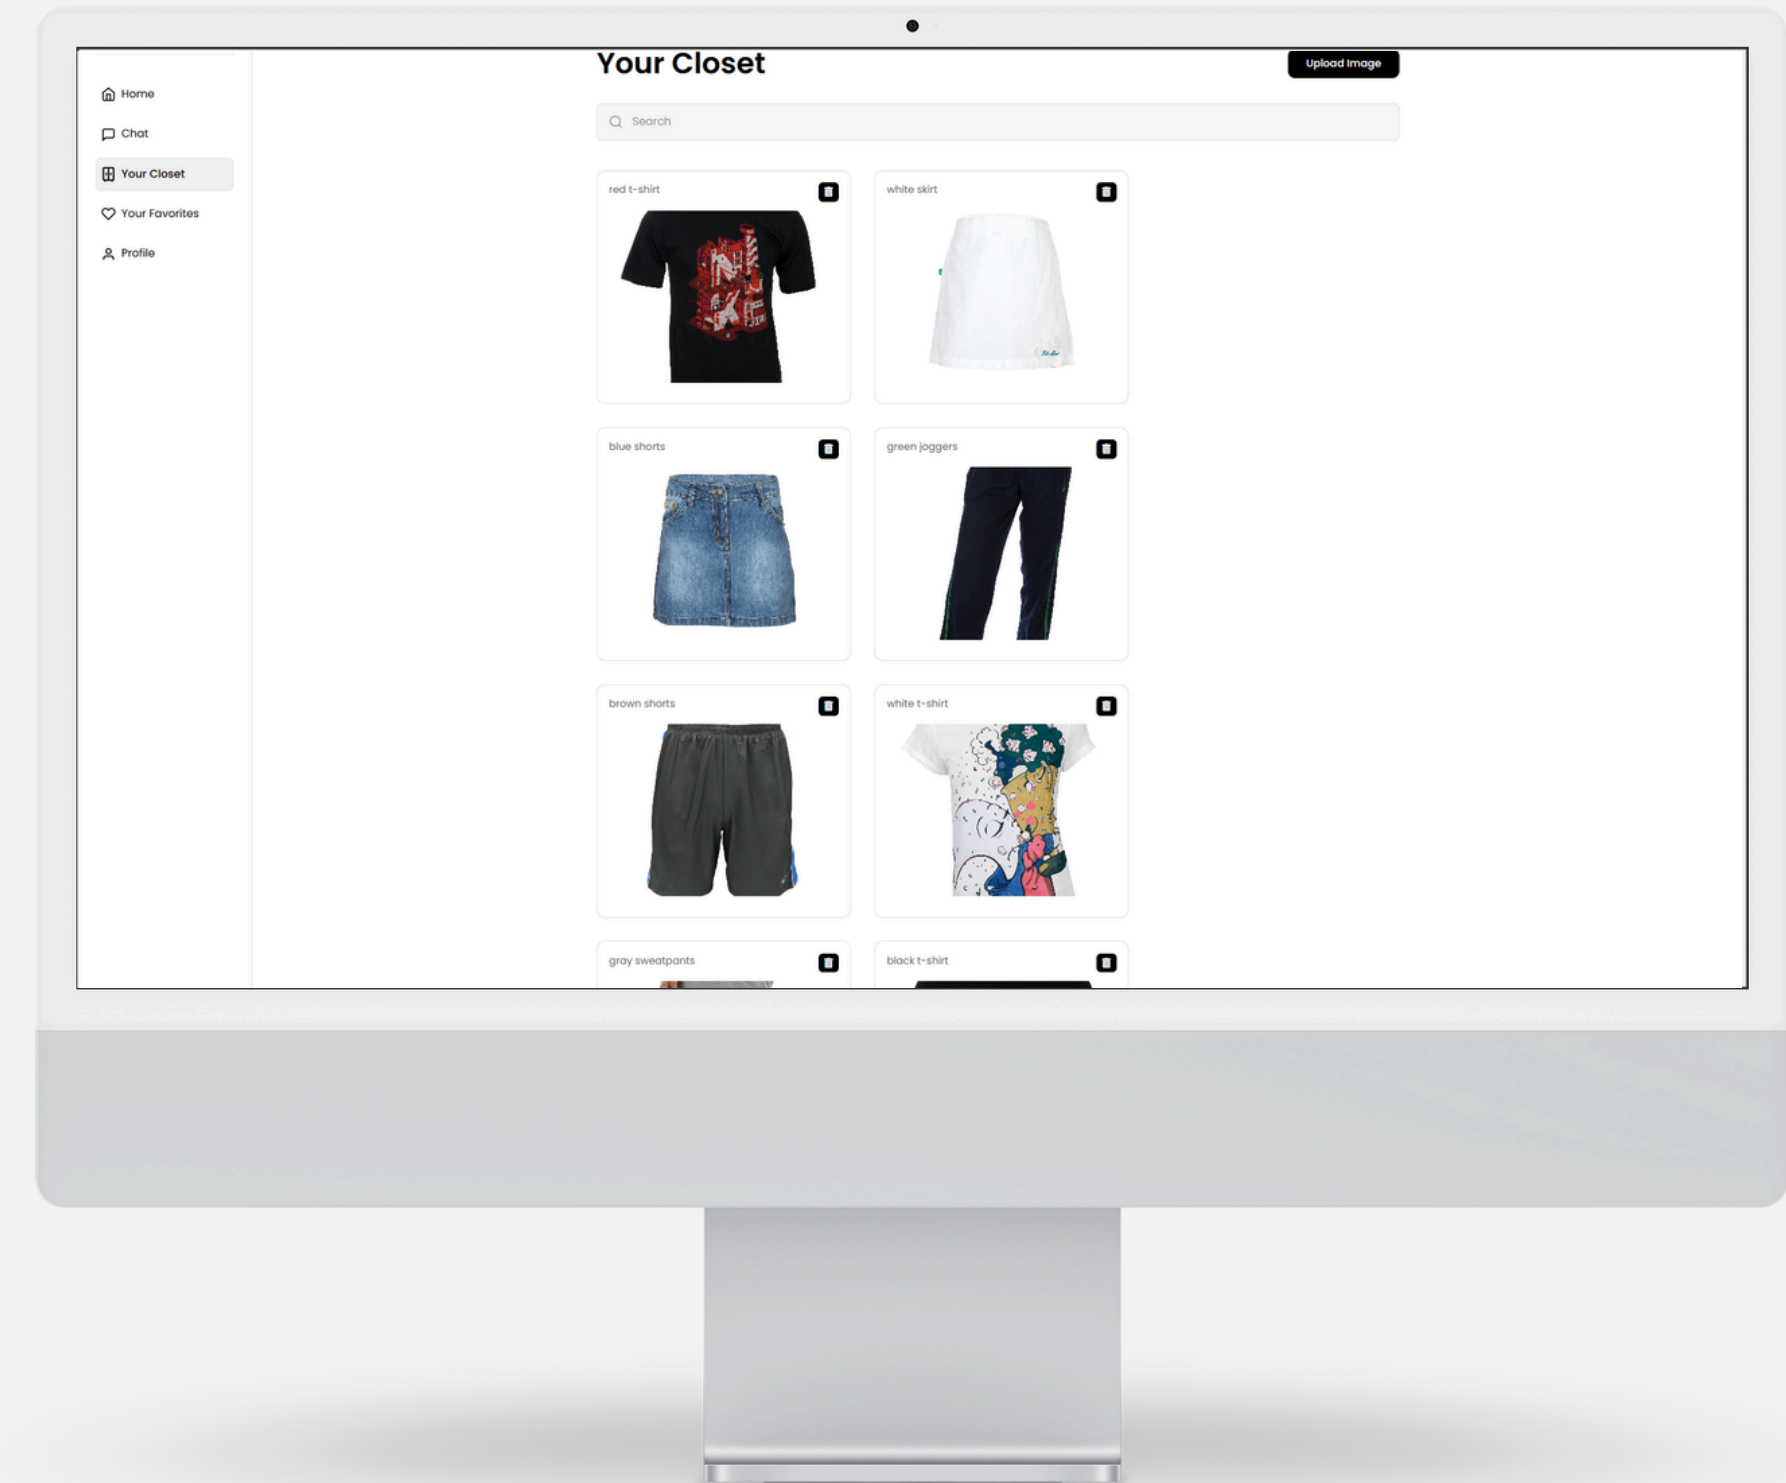

- Digital Wardrobe Creation
- Conversational Outfit Recommendations
- AI-Generated Outfit Visualizations
- Favorites Management

[NEXT](#)

CORE CAPABILITIES

Digital Wardrobe Creation

Users upload images of their garments to build a personal digital closet. Items are automatically classified by type, color, gender and occasion.

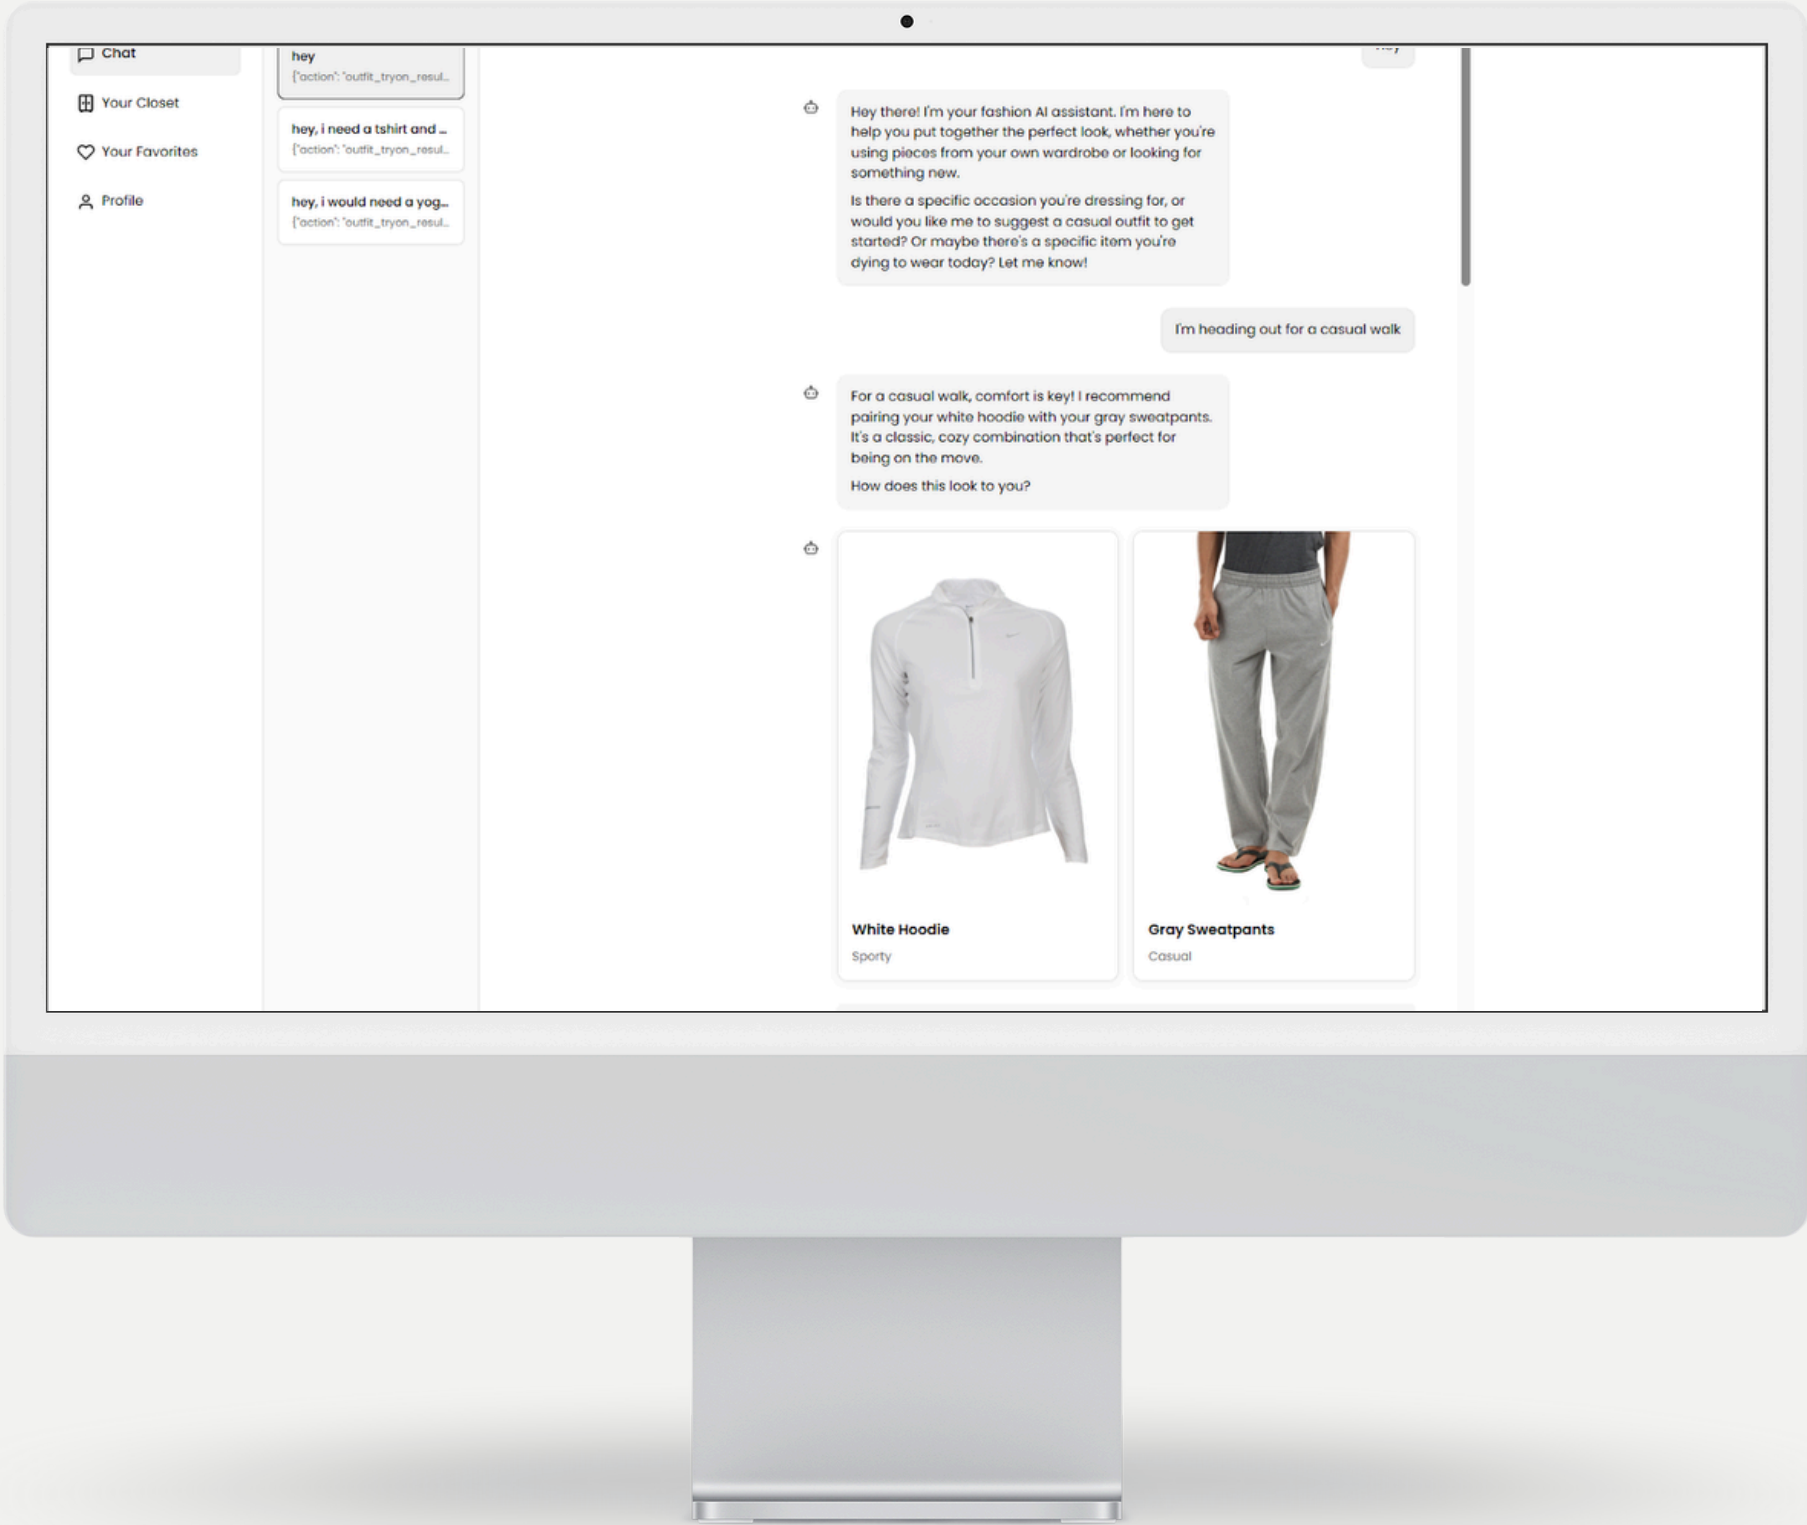

NEXT

CORE CAPABILITIES

Conversational Outfit Recommendations

A chat-based AI assistant understands natural language requests and suggests outfits based on **user preferences** and **wardrobe** content....

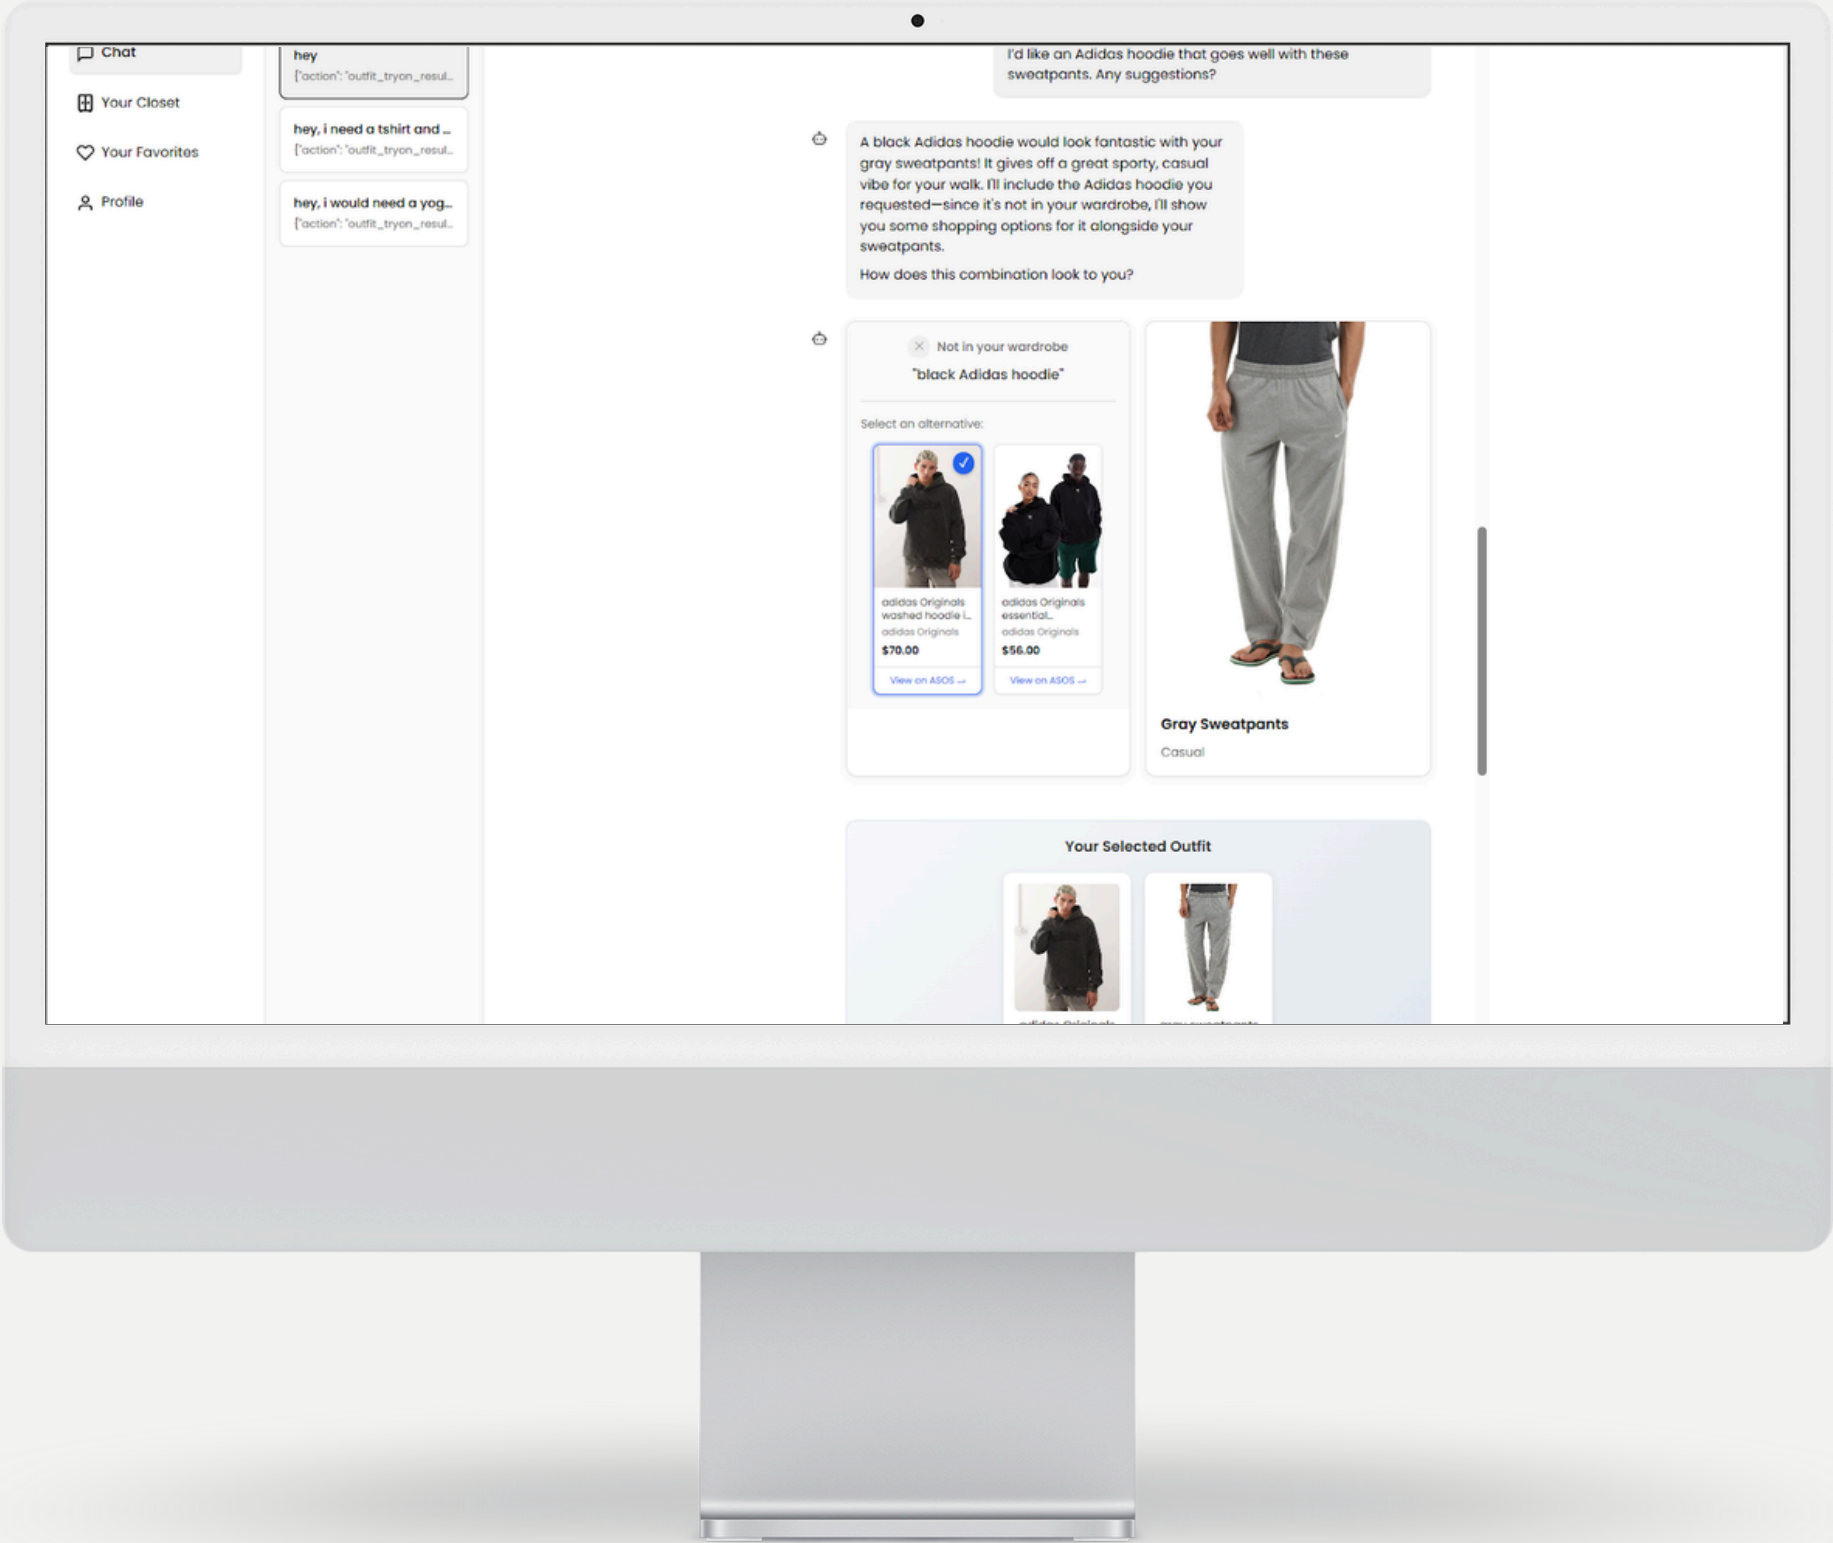

NEXT

CORE CAPABILITIES

Conversational Outfit Recommendations

...while seamlessly extending recommendations with items from the ASOS catalog when needed.

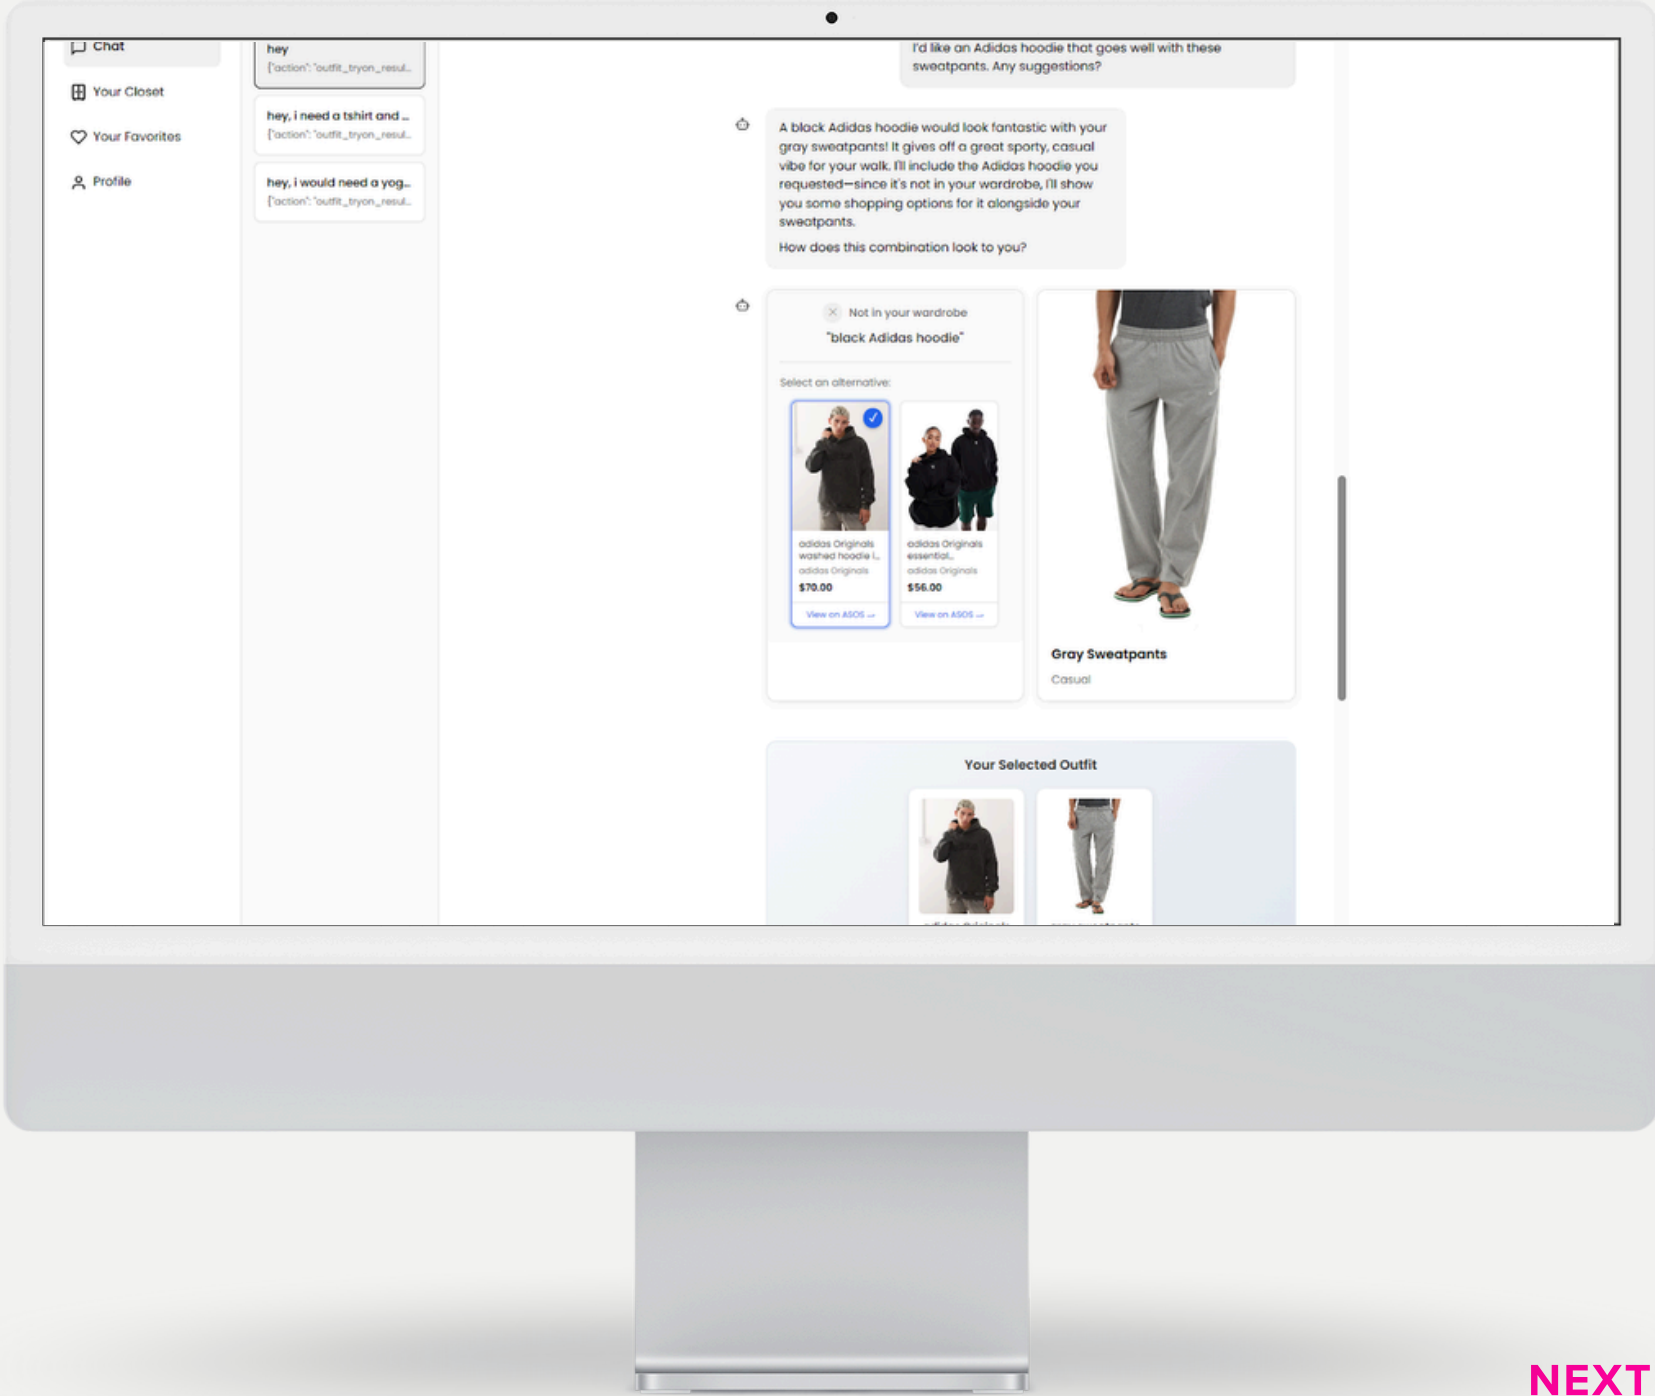

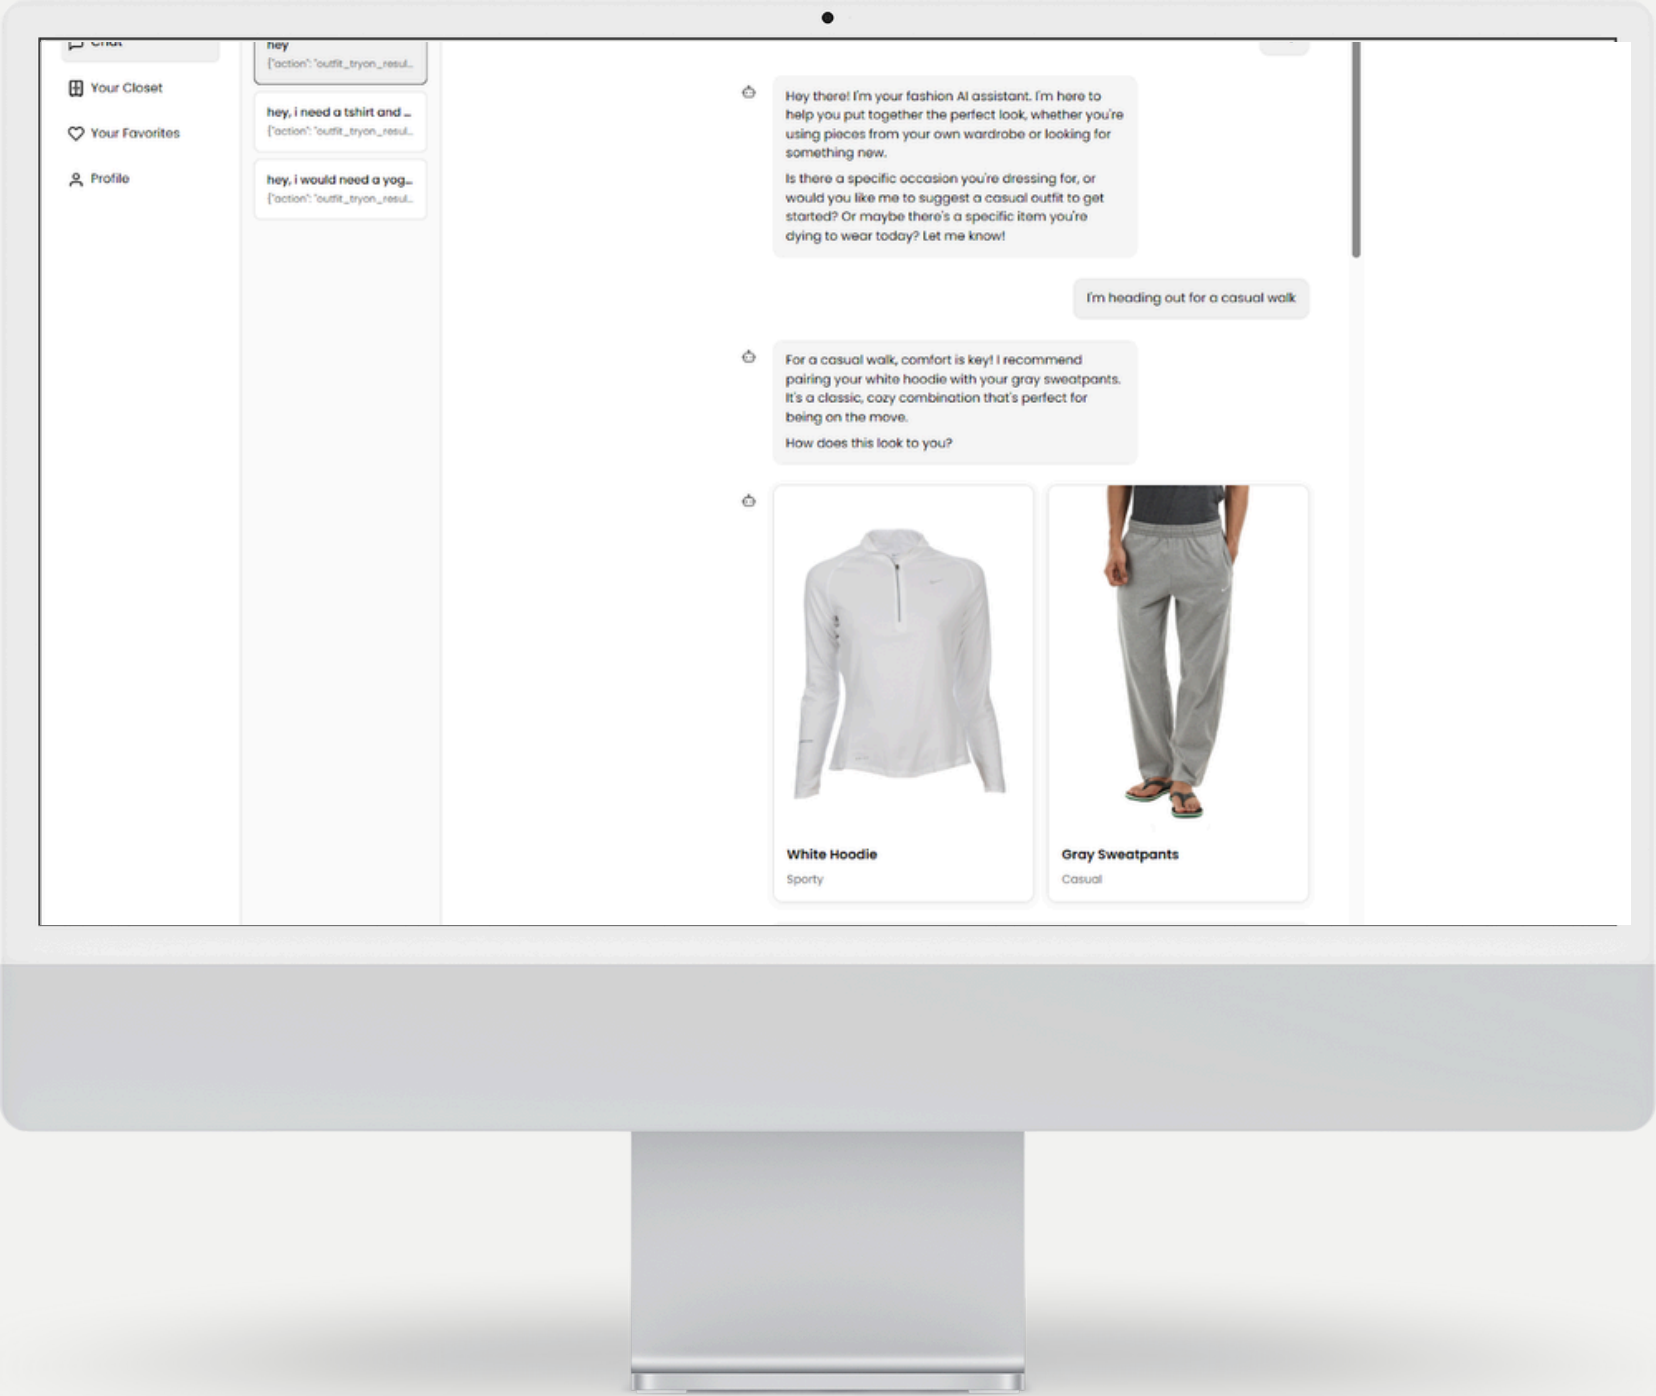

NEXT

CORE CAPABILITIES

AI-Generated Outfit Visualizations

The system generates realistic virtual try-on images, allowing users to preview suggested outfits on themselves.

Current Progress

Implementend & Functional	Future Plans
User authentication and profile management	Long-term personalization through user profiling and behavior analysis
Digital wardrobe: garment upload, storage and management	Option to create a customizable avatar as an alternative to a personal photo
Automatic garment analysis using CLIP (type, color, occasion)	Offer filters for budget, brand, sustainability or season
Conversational AI stylist for outfit recommendations	Allow social sharing of outfits and recommendations
Outfit generation and visualization (VTON pipeline)	Integrate voice-based interactions for a hands-free experience
ASOS integration for adding online garments	Performance optimization and error handling
Favorites system to save and manage generated outfits

Evaluation - User Acceptance Testing (UAT)

Target Users: young adults interested in fashion who do not have professional styling knowledge and rely on digital tools for outfit inspiration and shopping support.

Selected Users:

- **Kilian (27):** technical user (AI-aware, MSc Informatics students)
- **Victoria (23):** non-technical user (Social Studies student)

Test Procedure - Tasks

- Create an account and log in
- Upload wardrobe items
- Chat with the AI stylist
- Generate outfit suggestions
- Use the virtual try-on feature
- Save favorite outfits
- Test online outfit suggestions

NEXT

Evaluation - User Satisfaction Table

Feature	Kilian (User)	Victoria (User)
Create new account	★★★★★	★★★★☆
Login / Logout	★★★★★	★★★★★
Forgot password	★★★★★	★★★★★
Add/Del. wardrobe items	★★★★★	★★★★★
Search wardrobe items	★★★★★	★★★★★
Create a new chat	★★★★★	★★★★★
Live chat AI response	★★★☆☆	★★☆☆☆
AI outfit suggestions	★★★☆☆	★★☆☆☆
View online item details	★★★★★	★★★★★
Open product page	★★★★★	★★★★★
Generate try-on image	★★★☆☆	★★★☆☆
Save/Rem. favorite outfits	★★★★☆	★★★☆☆
Update profile photo	★★★★★	★★★★★

Evaluation - Results

Test Result Analysis

- Core features worked, but AI recommendations and online suggestions were weak
- Confusing JSON responses in the chat.
- Gender bias in outfit suggestions (personalization not handled yet)

Improvements After User Feedback

- Improved outfit recognition
- Fixed confusing JSON-style AI responses

Thank You
